

SCHEDULE 4

ENERGY IMBALANCE SERVICE

Energy Imbalance Service is provided when a difference occurs between the Energy scheduled in the Day-Ahead Energy Market and the actual delivery of Energy to a Load located within the MISO Balancing Authority Area over a single hour in the Real-Time Energy Market. The Transmission Provider shall offer this service when Transmission Service is used to serve Load within the Transmission Provider Region. Each Market Participant must purchase Energy Imbalance Service from the Transmission Provider. For purposes of Energy Imbalance Service, if a Point of Delivery serves more than one Market Participant, the Energy Imbalance Service and any associated charges will be computed by the Transmission Provider for the Point of Delivery and the allocation of the MWh charges for this service to the Market Participants shall be the responsibility of the designated Meter Data and Management Agent responsible for the Point of Delivery.

For each Market Participant, Energy Imbalance Service is considered to be the difference between the Energy scheduled in the Day-Ahead Energy Market and the actual delivery of Energy to a Load within an Hour. The difference will be settled as a Real-Time Energy Market transaction and will be charged the hourly Locational Marginal Price determined pursuant to Module C, Section 40.2.11 of this Tariff in whole MWh.
